

Printer Setup eFactory Coworking

Remote Printing (enables printing outside eFactory network and on mobile devices)

1. Download the remote print driver from Epson
[Windows](#)
[Mac](#)
2. Follow the instructions appropriate for your operating system on [this page](#).
3. When asked for the printer's email address, enter "eFactoryEpson". There is no access key.
*If you are using a Mac, you will need to use the "Add Printer" dialog after the installation process is complete. The printer will be added automatically for Windows users.

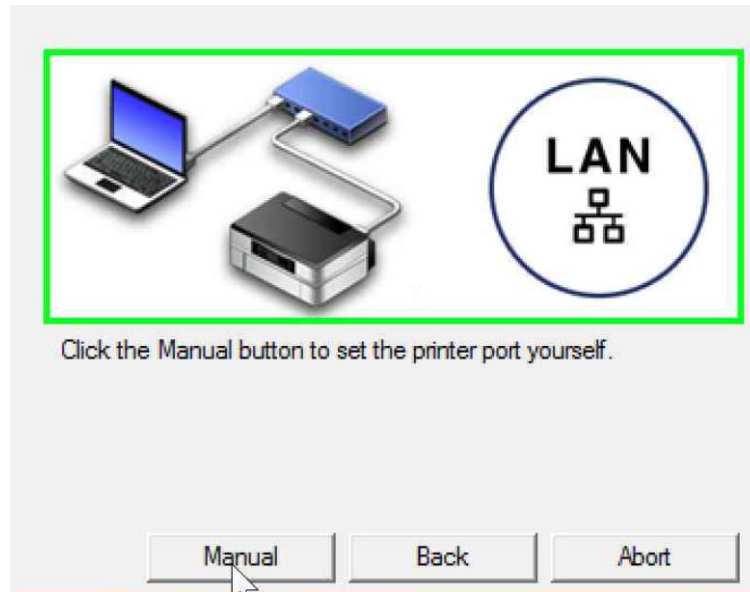

Local Network Printing (enables double-sided printing and advanced formatting options)

1. Download the printing and scanning drivers from Epson
[Windows – Complete download list](#)
[Mac – Complete download list](#)
2. Install the printer driver by following the prompts in the installation wizard.
3. Specify that you will be using a network connection to connect to the printer

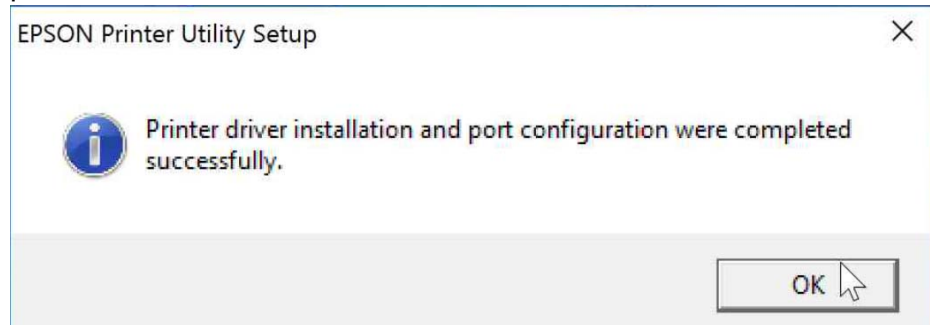

4. Provided you are on the eFactory-Coworking wireless network, the installation wizard should automatically discover the printer.
5. Should automatic discovery not work, you can manually enter the IP address of the printer (192.168.1.120). This should not be necessary if you are on the correct wireless

network.

6. Once the printer is discovered, it will be automatically added to your installed printers.

*This process is similar on Mac OS; the printer will be automatically discovered and added by the installation wizard.

A complete user guide for this ET-165000 printer can be found here:
